Aberystwyth University Recruitment Team *April 26, 2021*

PENGLAIS
ABERYSTWYTH
SY23 3FL

Graduate Trainee – IT Networking

Dear Team,

I'm a third-year student studying for a BSc in Computer Science and Artificial Intelligence at Aberystwyth University. Concurrent to my studies I have created the Computer Science department's Discord server for which I am also an administrator. The server has over 800 members including lecturers, alumni, staff and students. I developed this community of people, which previously did not exist, and is now an essential part of the department's online presence. This server acts as a central hub for announcements from the department and as place for people to discuss a multitude of topics ranging from coding to cooking. In addition, I created a small sub community of this server where I collaborate with other students to develop Discord bots. I have spent the last three years working as a paid Demonstrator for the department of computer science, a student representative and a Computer Science Advisor, a role that is usually only given to Masters' students.

In my free time I create Discord bots in Python, teach myself to write websites using Node.js and React, self-host websites and other services that I run off a Raspberry Pi.

Working for Oracle would provide valuable experience in my first steps into the industry as well as giving me the opportunity to gain a deeper understanding of APIs and cloud infrastructure which I use daily when working with Discord's API or Google Cloud Computing's services.

I am an enthusiastic, self-motivated and innovative person and am looking for my first graduate job. I enjoy public speaking and working as a team leader. As an added bonus, I also speak fluent Italian as I was born in Italy to British parents and lived there until 2018.

Best regards and hope to hear from you soon,

Joel Adams
